Overview of our Environmental and Social Management Policy for Financing and Investment Activity

1. Our approach under our Environmental and Social Management Policy for Financing and Investment Activity

- Companies are expected to contribute to the sustainable development of society as good corporate citizens. In terms of the social and environmental impact of business decisions and business activity, companies need to consider the expectations of their stakeholders and ensure that their actions are not only aligned with international standards but also transparent and ethical.

- At Mizuho, we understand the importance of our social responsibility and duty to the public and we ensure that our corporate conduct fulfills our responsibilities to the communities in which we operate, giving due consideration to the expectations of a diverse range of stakeholders. This enables us to contribute to sustainable social and economic development as well as be part of the solution to issues affecting society.

- In regards to environmental issues, including climate change, we will endeavor to leverage our financial intermediary and consulting capabilities to maximize beneficial impacts and avoid or mitigate adverse impacts on the environment.

- One of the ways in which we fulfill our social responsibility and duty to the public is to provide financial services such as financing and capital raising support (“financing and investment”) to companies which are taking appropriate measures to address social issues. At the same time, we are also sensitive to the risks involved in engaging in business with companies connected to adverse social impacts such as environmental or human rights issues, or which are not taking appropriate measures to meet stakeholder expectations.

2. Businesses subject to this policy and implementation methods

- In this document, Section 3. (1) Financing and Investment Transactions Prohibited Regardless of Sector lists projects for which we prohibit any financing or investment. Section 3. (2) Financing and Investment Transactions which Require Additional Due Diligence Regardless of Sector and Section 3. (3) Policies on Specific Industrial Sectors describe our practices for determining whether to
engage in transactions with clients/projects in subject sectors, accounting for the
degree to which the client has taken steps to avoid or mitigate risk and other due
diligence as appropriate, based on the characteristics of the services we are
providing.

- In addition, based on this policy, our primary subsidiaries participate in
  engagement with specific clients in each sector with the aim of sharing a medium-
to long-term perspective on opportunities and risks accompanying environmental,
social, and governance (ESG) issues and climate change.

3. Specific policy implementation

(1) Financing and Investment Transactions Prohibited Regardless of Sector

In recognition of the serious risks to and adverse impacts on the environment and
society, we refuse to engage in transactions related to the following types of projects:
- Projects with an adverse impact on wetlands designated as Wetlands of
  International Importance under the Ramsar Convention.
- Projects with an adverse impact on UNESCO World Heritage sites, excluding
  projects that have received prior consent from the relevant national
government and UNESCO.
- Projects violating the Convention on International Trade in Endangered
  Species of Wild Fauna and Flora (Washington Convention), excluding cases
  permitted under any country’s reservation(s) to the convention.
- Projects involving child labor or forced labor

(2) Financing and Investment Transactions which Require Additional Due Diligence
   Regardless of Sector

In recognition of the serious risks to and adverse impacts on the environment and
society, we make decisions on financing and investment for the following types of
projects based on a cautious and considered approach aimed at accounting for the
degree to which the client has taken steps to avoid or mitigate risk:
- Projects with adverse impacts on indigenous people’s local communities.
- Projects involving land expropriation that causes forced relocation of residents

(3) Policies on Specific Industrial Sectors

For certain sectors such as those listed below, where there is a particularly high
possibility of contributing to adverse environmental or social impacts, our decisions
regarding whether to engage in business transactions take into consideration any applicable international standards or guidelines, whether the client or project has received relevant certifications, and whether there are any potential conflicts with local communities:

1) Weapons
We avoid providing financing or investment which will be used for the manufacture of weapons designed to kill or inflict structural damage during wars or armed conflicts. In addition, we avoid providing financing or investment to any manufacturer of cluster munitions, antipersonnel landmines, or biochemical weapons, regardless of the purpose of the funding, in view of the inhumane nature of these weapons.

2) Coal-fired power generation
Climate change is closely tied to various economic and social issues, and we recognize that addressing climate change is an important issue in the medium to long term. As a financial services group, we are dedicated to holding dialogue with clients and other stakeholders and fulfilling our consulting role, and will proactively address climate change and support the shift to a low-carbon society. These initiatives will also be promoted for the purpose of securing stable energy supplies in countries around the world.

Compared to other forms of power generation, coal-fired power generation produces more greenhouse gases, in addition to producing harmful substances such as sulfur oxide and nitrogen oxide. Therefore, it presents a higher risk of contributing to climate change, air pollution, and other environmental impacts.

In light of this, we do not provide financing or investment which will be used for new construction of coal-fired power plants. (This excludes business to which Mizuho is already committed as of the start of this policy.)

However, when a proposed coal-fired power plant is essential to the relevant country’s stable energy supply and will contribute to reduction of greenhouse gas emissions by replacing an existing power plant, we may provide financing or investment for the project, based on careful consideration.
We will also continue to support development of innovative, clean, and efficient next-
generation technology that will contribute to the expansion of sustainable energy, as well as other initiatives for the transition to a low-carbon society.

3) Coal mining
We recognize that coal mining, when not managed properly, entails risk of adverse environmental and social impacts, which may include damage to ecosystems from hazardous waste produced in coal mines, as well as deaths or injuries resulting from mining accidents. Accordingly, our decisions regarding financing and investment for coal mining projects involve a thorough examination of the impacts on the environment, industrial safety and health, and other areas.

We do not provide financing or investment to coal mining projects employing the mountain top removal method, due to the severe impact this method has on the environment.

Further, in light of the fact that coal and other fossil fuels contribute to emissions of greenhouse gases, we undertake engagement with clients to confirm their measures for addressing transition risk accompanying climate change.

4) Oil and gas
We recognize that oil and gas extraction and pipeline construction entail risk of adverse environmental and social impacts, which may include pollution of oceans and waterways from oil spills and gas leaks, as well as violations of the human rights of indigenous peoples. Accordingly, our decisions regarding financing and investment for oil and gas projects involve a thorough examination of the impacts on the environment and of the potential for conflicts with indigenous peoples or local communities.

Further, in light of the fact that oil, gas, and other fossil fuels contribute to emissions of greenhouse gases, we undertake engagement with clients to confirm their measures for addressing transition risk accompanying climate change.

5) Palm oil, lumber, and pulp
While we recognize that palm oil, lumber, pulp, and other forest products are essential commodities for maintaining our lifestyles and infrastructure, we are also aware of the
potential human rights abuses within the production process, such as the violation of indigenous people’s rights or the use of child labor, in addition to environmental issues such as deforestation (including forest burning) and damage to biodiversity. In order to avoid becoming involved in such projects which may inflict human rights abuses or environmental destruction, our business decisions involve a thorough examination of whether there are any potential conflicts involving indigenous people or local communities, and we take into consideration whether the client/project has received certification for the production of sustainable palm oil or whether they have been certified for responsible forest management.

In the event that we identify any unlawful act during the term of a transaction, we urge the client to take immediate remedial measures. In the event that the client has not taken appropriate measures to address social issues, we undertake engagement with the client to promote remedial measures and, if the client’s remedial measures are unsatisfactory, we suspend new financing and investment.

Further, we urge our clients in these sectors to formulate sustainable environmental policy, such as No Deforestation, No Peat, and No Exploitation (NDPE), and to respect Free, Prior, and Informed Consent (FPIC) in relation to local communities.

4. Governance related to this policy

(1) Governance

Relevant governing bodies within Mizuho such as our Executive Management Committee and/or Business Policy Committee will regularly review whether our measures related to the risks, sectors, and other factors covered under this policy are appropriate and sufficient, with consideration to changes in the external environment and the results of implementation. Following these reviews, our governing bodies may revise or otherwise make changes to our measures to enhance their implementation.

Mizuho Bank, Mizuho Trust & Banking, Mizuho Securities, and Mizuho Americas put in place an operational framework for this policy and began implementing it from June 1, 2020.

(2) Education and training
Mizuho will conduct training and professional development exercises to enhance executive officers’ and employees’ understanding of environmental and human rights issues. We will also implement educational seminars, training, and awareness building activities for executive officers and employees regarding compliance with the internal regulations and procedures which are relevant to their field of work.

(3) **Stakeholder communication**

As part of our initiatives in this area, we place a strong emphasis on engagement with stakeholders. Our objective in taking this approach is to ensure that our initiatives are aligned with society’s standards and expectations.
