

## Exceptional USD Strength & Endogenous Risks

**Fed Hiking Cycle (Cumulative Rate Hikes; bp):** Although not the Greatest Amplitude of Rate Hikes (1970s being More Brutal, with >700bp of Hikes), this Cycle Marks the **Fastest Pace of Hikes; 300bps Over 7 Months.**

**Corresponding USD Performance (Cumulative % Chg\*):** Notably, the **Current Rate Hike Cycle** Has Resulted in the **Sharpest Phase of USD Strength**, although 1998-2000 Saw Larger Gains over the first 18 months.

“The things that you own end up owning you” – Fight Club

**Exceptional Strength:** In our recent coverage of “higher for longer” USD\*, we observed that “*the sheer amplitude of ... sweeping USD strength suggests it is not merely the garden variety Fed tightening reaction*”. Admittedly, the **pace of Fed rate hikes so far is at the fastest since the ‘70s**. But **neither amplitude of hikes nor levels of rates** are sufficiently unprecedented to **explain exceptional USD strength**. After all, USD bulls have been conspicuously absent in a number of past Fed tightening cycles.

**Extreme Speed:** Moreover, **rarely have Fed tightening cycles incited such pronounced and sharp USD surge**. To be sure, while the *1998-2000 episode of Fed tightening cycle resulted in similar USD gains*, this was *far more gradual*; over 17 rather than 7 months. Point being, the **extreme speed with which the USD has surged is a critical aspect of the USD’s exceptional gains**.

**Edge of Uncharted:** Taken together, the **speed and strength of USD ascendancy border on uncharted territory**; even for an aggressive Fed tightening cycle. A **perfect storm of COVID impact and geo-politics** have only provided USD bulls with the benefit of both “*hawkish reflex*” and “*haven refuge*”.

**Endogenous Risk:** Trouble is, **exceptional USD strength is an endogenous risk amplifying global policy headwinds, accentuating risks of global recession and financial shocks**; as *exacerbated imported inflation and credit/balance sheet shocks from currency mis-match* threaten to *cascade into dislocations and self-reinforcing capital flight*. In fact, even the Fed may be under-accounting for the USD’s tightening impact. *Exceptional USD strength, rather than being owned by the Fed, could end up owning the Fed.*
